

Software

# EnerQuip Software

# EQ Torque

### KEY FEATURES

- ✓ Revolutionary, turns on shoulder, make up of new style connections e.g. VAM LDR
- ✓ Live make up screen has shaded areas for shoulder and final torque windows
- ✓ Advanced graph overlay will plot up to the last 50 connections on top of one another to help spot a bad make up
- ✓ Trend screen captures a timeline view of the key data points from up to the last 50 connections and helps identify a suspect key data point
- ✓ RPM is plotted as chart beneath the main chart on the live make up screen
- ✓ Two-page torque report means everything is easy to read and the chart is printed on a white background for high contrast
- ✓ Export raw data to excel for additional or third party analysis
- ✓ Save your torque reports and data, securely, in the cloud for additional peace of mind
- ✓ Advanced report control allows the operator to alter every axis to display the data exactly as required
- ✓ Compatible with any fully rotational torque machine

EnerQuip's market leading software has been designed to meet and exceed all of the requirements and standards set forth by the major premium thread suppliers.

The advanced overlay screen will show dozens of connections that were made up using the same parameters from any point in time.

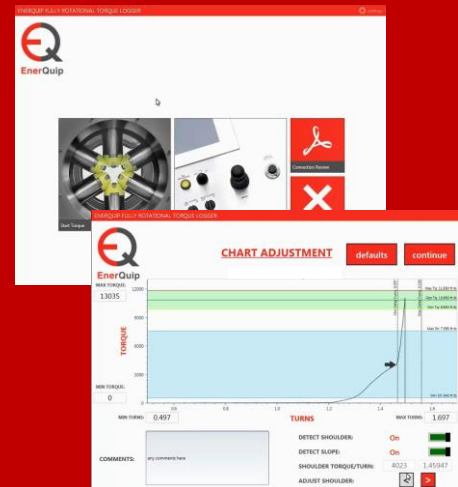

- ✓ Overlay the most recent make-up profile with up to the last 50 connections
- ✓ Latest make up clearly defined in red over the previous ones in grey
- ✓ Instantly spot a sub-standard make up and ask why

## EnerQuip Torque Turn Software

We firmly believe that an upgrade to the latest EnerQuip torque turn software is a huge step forward for risk mitigation and QA compliance.

The software will aid the operator hugely in spotting sub-standard make ups which could potentially cost the company dearly further down the line.
