

EnerQuip

Case Study

Purchase Option

Lease vs. Buy

PROS VS CONS

Leasing: The Benefits

- ✓ Keeps your equipment from becoming obsolete. With a lease, you don't own a depreciating asset
- ✓ Offers a predictable monthly expenditure, this can help you budget more effectively
- ✓ Acquire new technology that might be otherwise unaffordable.
- ✓ Keep up with competitors without draining your financial resources.

Leasing: The Downside

- ✓ It can work out to be more expensive than if you buy the assets outright.
- ✓ Your business can be locked into medium or long-term agreements.

Buying: The Benefits

- ✓ Buying equipment is easier than leasing - you decide what you need, then go out and buy it.
- ✓ Your equipment is tax deductible. With most leases, you can only deduct the monthly payment.
- ✓ Buying new equipment can be viewed as an investment into the company.

Buying: The Downsides

- ✓ You must pay the full cost of the asset up front which can affect your cash flow.
- ✓ With newer technologies being invented constantly, you may be stuck with out-dated equipment.

With the pressure of cost efficiencies on the industry continuing, leasing of equipment is becoming more and more popular.

With customers across the globe becoming more used to paying for things on a month-by-month basis, many want to apply the same method to their equipment.

Flexible Purchase Options

EnerQuip's purchase options make it easier for your business to

- ✓ Invest into the company's future
- ✓ Acquire new equipment
- ✓ Budget more effectively
- ✓ You decide what you need when you need it.
